STATISTICS RELATIVE TO
THE APPLE PROCESSING INDUSTRY
IN NEW YORK STATE

1948-59

This report presents statistics on the apple processing industry in New York State (including cider mills, canneries, freezing plants, evaporators, and other processors) for each crop year from 1948 through 1959.

New York State processors received 8.7 million bushels of apples in their plants in 1959, about 14 percent less than the record receipts in 1958. Receipts in eastern New York were about one-third less than in 1958 while in western New York they were 11 percent smaller. About 3 percent of the total 1959 receipts came from outside the State.

Approximately three-fifths of the apples processed were used for canning and applesauce, including baby food; slightly over one-fourth for cider and juice; and drying, freezing, and other products accounted for the rest. Statistics for the industry engaged in the daily preparation and shipment of fresh sliced apples to pie bakers are included here only when this operation takes place in or near the apple producing areas. In New York City (for which data are not included) this business is carried on quite extensively, using open market or contract purchases of apples throughout the year.

There were 191 plants making cider or other products during the 1959 season compared with 200 in 1958.

The Crop Reporting Service acknowledges with sincere appreciation the generous cooperation of the people in the apple processing industry whose reports have made possible this summary.

1/ Apples received at a plant and then transferred to another plant for processing are included only in plant where processed. One bushel is assumed to equal 43 pounds.

2/ Among other products for which these apples were used are jelly, apple butter, mincemeat, and fresh sliced apples for pies in upstate areas. Included also are small amounts of loss and shrinkage and some apples sorted out for sale as fresh fruit.

^{1/} The 1951 through 1959 prices are weighted by the quantities of apples used by the individual plants within each district, as well as by the importance of the several districts. For earlier years, the averages of prices as reported were weighted by the importance of the several districts.
